Description of the Business

- My business is a catering service, the product/service the business will provide is food and drinks for events like weddings or parties held at hotels or banquet halls. The potential customers could be married couples looking for a caterer for their wedding or wedding reception, birthday parties, and businesses having a staff party. My business is focused on having unique cuisines available for our customers to choose from so that they have varying options and can select the one they like best.

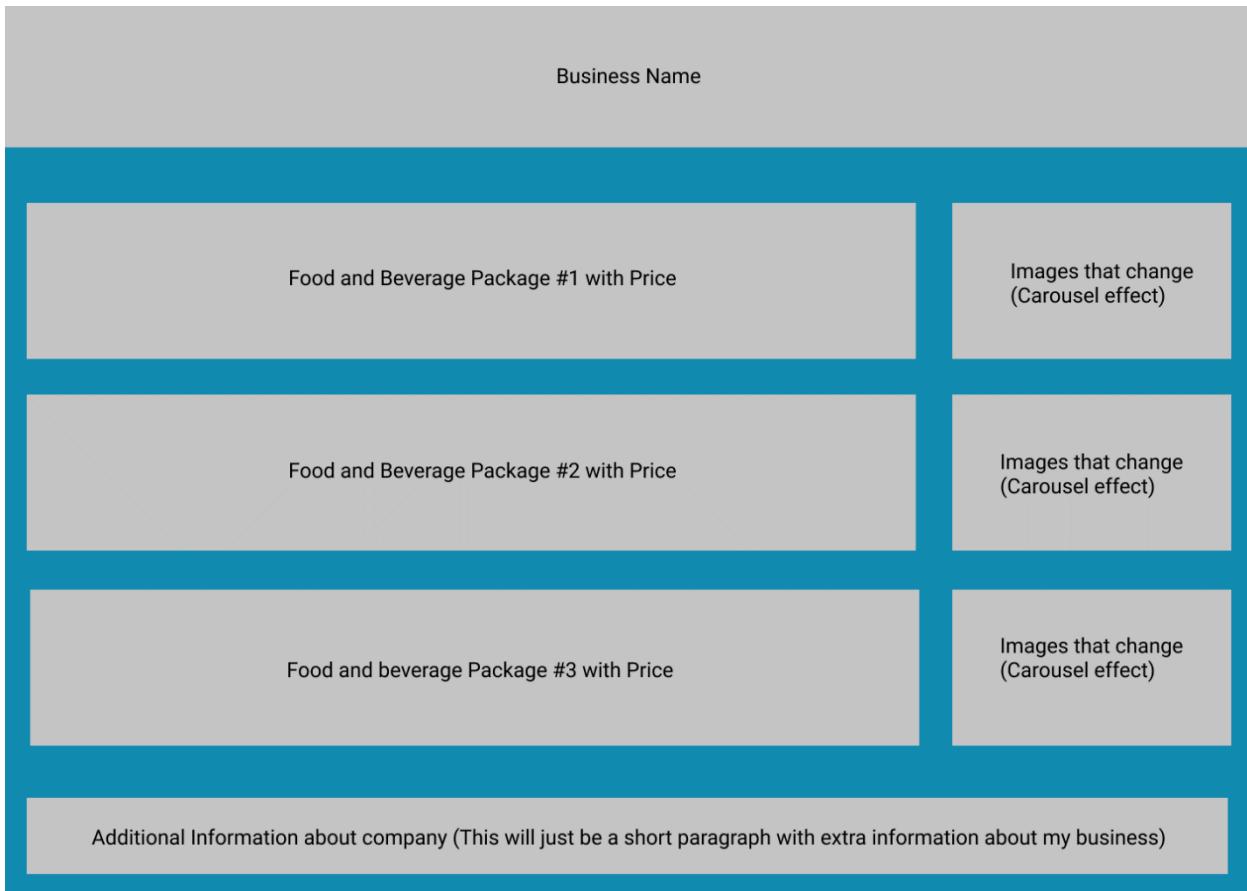

Figma Wireframes compared to screenshots of my website

- My Wireframes and my website are nearly identical the only differences I have is that my website has some buttons that were not included on my wireframes.

Business Information

We provide our customers with many different options for their catering needs. Select from a wide array of options that suit your tastes. Our employees will be happy to help you pick out the perfect package for wedding, birthday party, or staff party.

Reggie Goundar

I started this business in 2005 due to there being a lack of catering companies in this city. We have now been open for over 15 years and we plan to continue to operate in other cities near us. My company has been rated the number 1 catering company in the city for 5 years straight. I started this company so people could have access to great food for great prices and I hope that my company can continue to satisfy even more customers in the future.

[Click this to go to our food and beverage menu](#)

Please click the link above to go to the selection page to choose from a wide variety food and beverage options.

Website second page screenshot:

The screenshot shows a website titled "Catering Menu". It features three main sections: "Italian Night", "Fiesta Fun", and "Japanese Celebration". Each section includes a description, a price, and a small image. The "Italian Night" section includes a link to go back to the homepage.

Italian Night
Enjoy our Italian Night Package that includes authentic Italian dishes prepared by our professional chefs.
Includes:
: Arancini - An Italian snack made from a ball of rice coated with bread crumbs and then deep fried.
: Spaghetti aglio e olio - An Italian pasta dish made by lightly sauteeing minced garlic in olive oil, adding dried red chili flakes and then tossing with spaghetti.
: Cappuccino - An Italian coffee drink that is prepared with steamed milk foam.
: Bellini - A cocktail made with Prosecco and peach puree.
: Gelato - What better way to finish off the night with dessert out Gelato that comes in flavours like vanilla, choclate, pistachio, and hazelnut.

Fiesta Fun
Have a fun night filled with traditional Mexican foods and drinks made by our amazing kitchen staff.
Includes:
: Beef Quesadilla - Our quesadillas are filled with shredded beef, cheese, and beans that are then cooked on a griddle.
: Chicken Tostada - A crispy tortilla filled high with shredded chicken, refried beans, salsa, avacados, and queso fresco.
: Pork Tacos - Enjoy a light bite with our pork tacos packed with shredded pork, cheese, tomatoes, onions, salsa, and guacamole.
: Paloma - Tequila mixed with lime juice, fresh grapefruit juice and finished with a lime wedge.
: Café de olla - A traditional Mexican coffee.
: Churros - A deep fried dough pastry coated in a cinnamon sugar mixture.

Japanese Celebration

Instructions to run your project in GoormIDE

- To run my project on GoormIDE first click my project share link then type node app.js to start the server and then click on project and go down to running URL and port and copy the URL there and then paste the URL into your browser to see my website.

Screenshots for instructions on running my project:

The screenshot shows the GoormIDE interface. At the top, there are tabs for TERMINAL, SEARCH, RESOURCE MONITOR, and LINT. The TERMINAL tab shows the command "root@goorm:/workspace/INFO1213-Project# node app.js". Below the terminal is a navigation bar with tabs: PROJECT, CONTAINER, SCM, DEPLOYMENT, and WINDOW. The PROJECT tab is active. Under the PROJECT tab, there are several items: Common, Build, Run, Test, Find Command, Running URL and Port, and Build/Run Configuration. The "Running URL and Port" tab is highlighted. To the right of the navigation bar, there is a code editor window showing a JSON file named "cage.json".

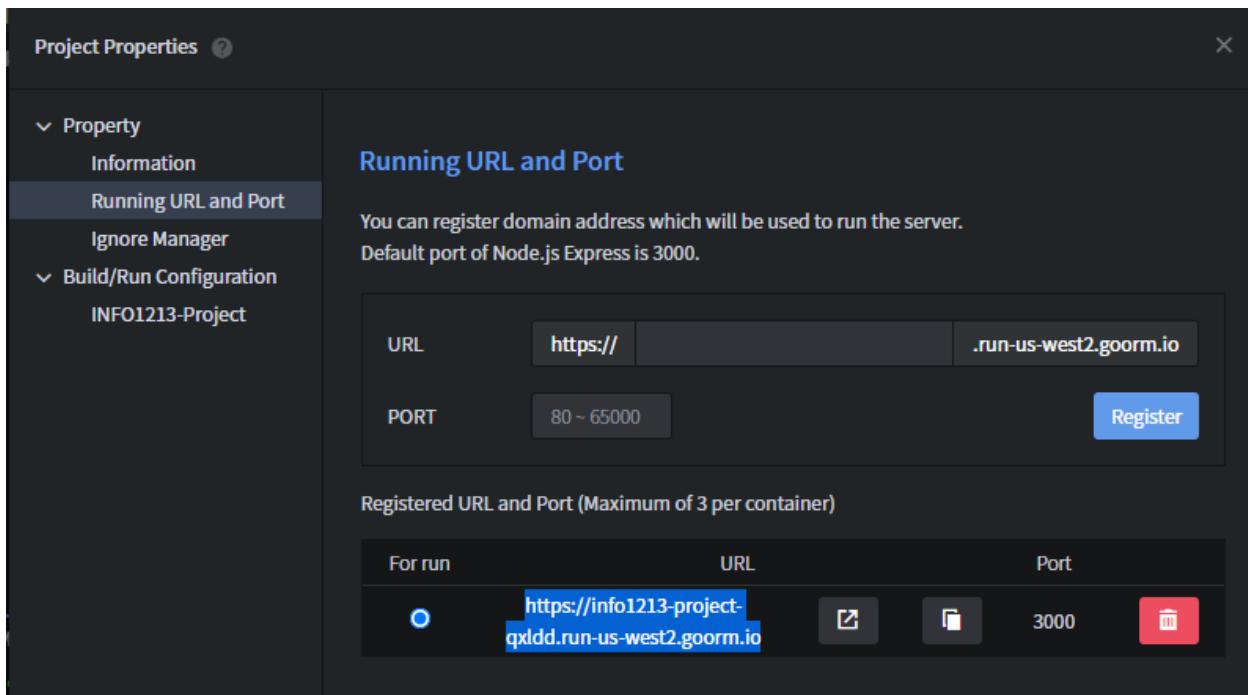

```
root@goorm:/workspace/INFO1213-Project# node app.js
```

```
cage.json
```

```
app.js *
```

```

```

Feature/Content Explanations

- From a business standpoint I will add things like being able to browse through different options for food and drinks, they will also have images to go along with them that will change, I will use a carousel for the pictures. I will have prices for each package that customers will be able to buy. I will have a homepage that will explain my business and show my businesses information along with information about me the business owner and have another webpage focusing on the different food and drinks that I will offer, the reason I want to have my website like this is so customers can see what my business is about and then being able to browse through my various products.
- From a technical standpoint I have added a multi column design for my website, I wanted it to be multi column so that it looks more professional. I also added in things like a carousel for my images, buttons that will provide customers with more information, and a navbar. My buttons will have features like dropdowns, collapse, and popovers. I have included a jumbotron and my businesses name will be put in the jumbotron so customers will have a clear idea of my business. The reason I added different features for my buttons was to make my website stand out a little, I have included screenshots below of my code showing my different button features like collapsing, popover, and dropdown buttons. I was able to add these features because I have used them before in our other assignments.

Code snippets of different button features:

```
<!-- Popover -->
<script>
$(document).ready(function(){
  $('[data-toggle="popover"]').popover();
});
</script>

<button type="button" class="btn btn-md btn-primary" data-toggle="popover" title="My company has 500 employees throughout all our locations.">Fun fact</button>

<!-- Dropdown Menu -->
<div class="dropdown">
  <button class="btn btn-primary dropdown-toggle btn-md" type="button" id="dropdownMenuButton" data-toggle="dropdown">
    Click this for additional information
  </button>
  <div class="dropdown-menu bg-primary">
    <a class="dropdown bg-primary text-light">Our website was made with HTML, CSS, and Bootstrap</a>
  </div>
</div>

<!-- Button that collapses -->
<p>
<button class="btn btn-primary" type="button" data-toggle="collapse" data-target="#collapseExample">
  Click this for more information
</button>
</p>
<div class="collapse" id="collapseExample">
  <div class="card2 card-body bg-primary text-light">
    Currently we have locations in Richmond, Vancouver, and Victoria. We will be expanding to Edmonton, Toronto, and Winnipeg with the next few years.
  </div>
</div>
```
